1. Firstly, you need to install **pagedown** from Github (till this moment can install from CRAN – Comprehensive R Archive Network):

```
remotes :: install_github('rstudio/pagedown')
```

2. Choose the Rmarkdown following this pic:

3. The document can be preview in HTML/print to PDF type:

- install.packages("xaringan")

To show the result in type of HTML in Rstudio, you are recommended to run:

```
xaringan :: inf_mr("Name_of_file.Rmd")
```

To generate a PDF, you are recommended to open the HTML page in Chrome and print the PDF there:

```
chrome_print("D:/Short Course Using  
R/Writingpaper_Book_Publish/Book/Book_rmarkdown/Creating-the-  
book.html")
```

Or in Rstudio we can do like this: `knit: pagedown::chrome_print`

4. Define the style of document:

output:

```
pagedown :: html_paged:  
css :["default-fonts", "default-page", "default"]
```

If you want to create your font, you can create by yourself:

```
body {  
  font-family:  
    "Palatino Linotype", "Book Antiqua",  
    Palatino, serif;  
}
```

```
output:  
  pagedown::html_paged:  
    css:  
      - my-fonts.css  
      - default-page  
      - default
```

5. Following the site: <https://github.com/rstudio/pagedown>
